

General storage conditions for finished and semi-finished products

Our company makes every effort to ensure the highest possible quality of its products. To keep the high quality at a sustainable level, it is necessary to observe the basic rules of storage and manipulation with the products.

General storage conditions:

1. Products must be stored under ambient conditions as specified below and properly protected from external influences.
 - Relative humidity max. up to 50 %
 - Temperature 20 - 25°C
2. The products must never be exposed to direct contact with water.
3. It is not advisable to expose the products to direct sunlight for a long time.
4. It is not suitable to store cartons (outer packaging) directly on the ground, always support them with e.g. a pallet.
5. During storage we recommend to keep a free space between the wall and the products to allow for air circulation. It is not suitable for cartons (outer packaging) to lean against the wall.
6. To achieve the optimal storage conditions we recommend to keep the goods in the original packaging as long as possible.
